ITM SKILLS UNIVERSITY

1. Problem Statement

What is the Problem?

- Too many insurance plans — hard to choose
- Complicated words that most people don't understand
- No easy way to compare plans side by side
- Monthly price is hidden — only yearly price is shown
- Extra benefits like dental and maternity are buried in fine print

2. My Solution — PolicyPick

1

Compare Page

All 6 plans in one table. Filter by budget using a slider. Toggle monthly / yearly price.

2

All Plans Page

See all plans as cards. Each card shows price, coverage and key features at a glance.

3

Plan Details Page

Click any plan to see its full details — hospitals, waiting period, what is covered, pricing.

3. Screenshot — PolicyPick

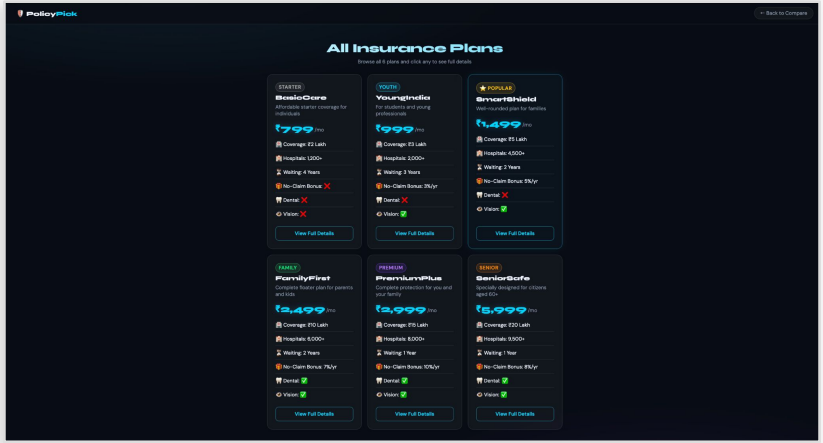
All Insurance



4. How It Works

Technologies Used

HTML5

Page structure & tables

CSS3

Dark theme & glassmorphism

JS

Filters, toggles & URL reading

How the website works — Step by Step

1

User opens compare.html

2

Moves slider → JS hides costly plan columns

3

Clicks Monthly/Yearly → JS updates all prices

4

Clicks View → opens plan-details.html?plan =name

5

JS reads URL → fills page with correct plan info

ITM SKILLS UNIVERSITY

5. Conclusion

What I Built

- A 3-page website to compare 6 health insurance plans
- Premium filter using a range slider
- Monthly / Yearly pricing toggle
- Dynamic plan details page using URL parameters
- Modern dark theme with glassmorphism design

What I Learned

- How HTML tables and sticky headers work
- How JavaScript finds and changes HTML elements
- How to read URL parameters using split()
- How to store data in JS objects and display it
- How to design multi-page websites

Built using only HTML, CSS, and JavaScript — no backend, no framework, no database.
